Port of Oxelösund

A port under powerful expansion

Things are going well for the port of Oxelösund. The benefits of our port along with our cargo handling ability make us an attractive business partner. The amount of cargo we handle each year is increasing at the same rate as our income from business, which in turn leads to further investment. We are a port under vigorous expansion.

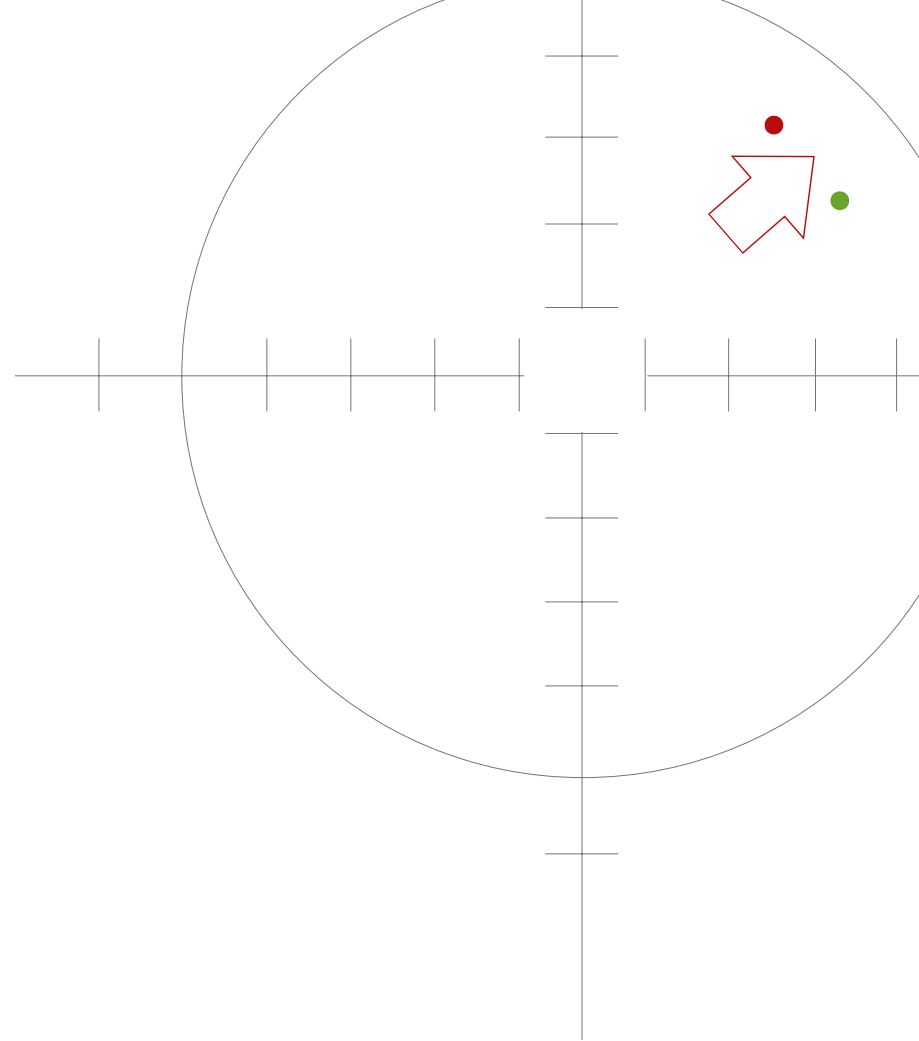

We regularly invest in new machinery, vehicles and construction projects and are constantly expanding our port area. Our loyal and professional staff fully understand their "role in the business", which means we can provide effective solutions to your transport needs.

Oxelösunds Hamn is a professional logistics partner which looks at the business of cargo movement from the broader perspective.

Welcome to the port of Oxelösund!

Erik Zetterlund
Managing Director

Oxelösunds Hamn AB

Port information

Terminal	Berth No	Length	Water depth
● Oil	11	105 m	13,5 m
● Dry Bulk	9,5-10	388 m	16,5 m
● General Cargo and Containers	3-8	589 m	8-9,7 m

16,5

Port of Oxelösund.

Maritime Advantages

Water depth: 16,5 m
Passage into port: 1 hour
Ice-free: All year round

Few ports in the Baltic can accept the very largest vessels. We can. The short passage into port means safe navigation, saved time and therefore lower costs. The port of Oxelösund has immediate access to open sea and is ice-free all year round.

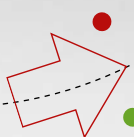

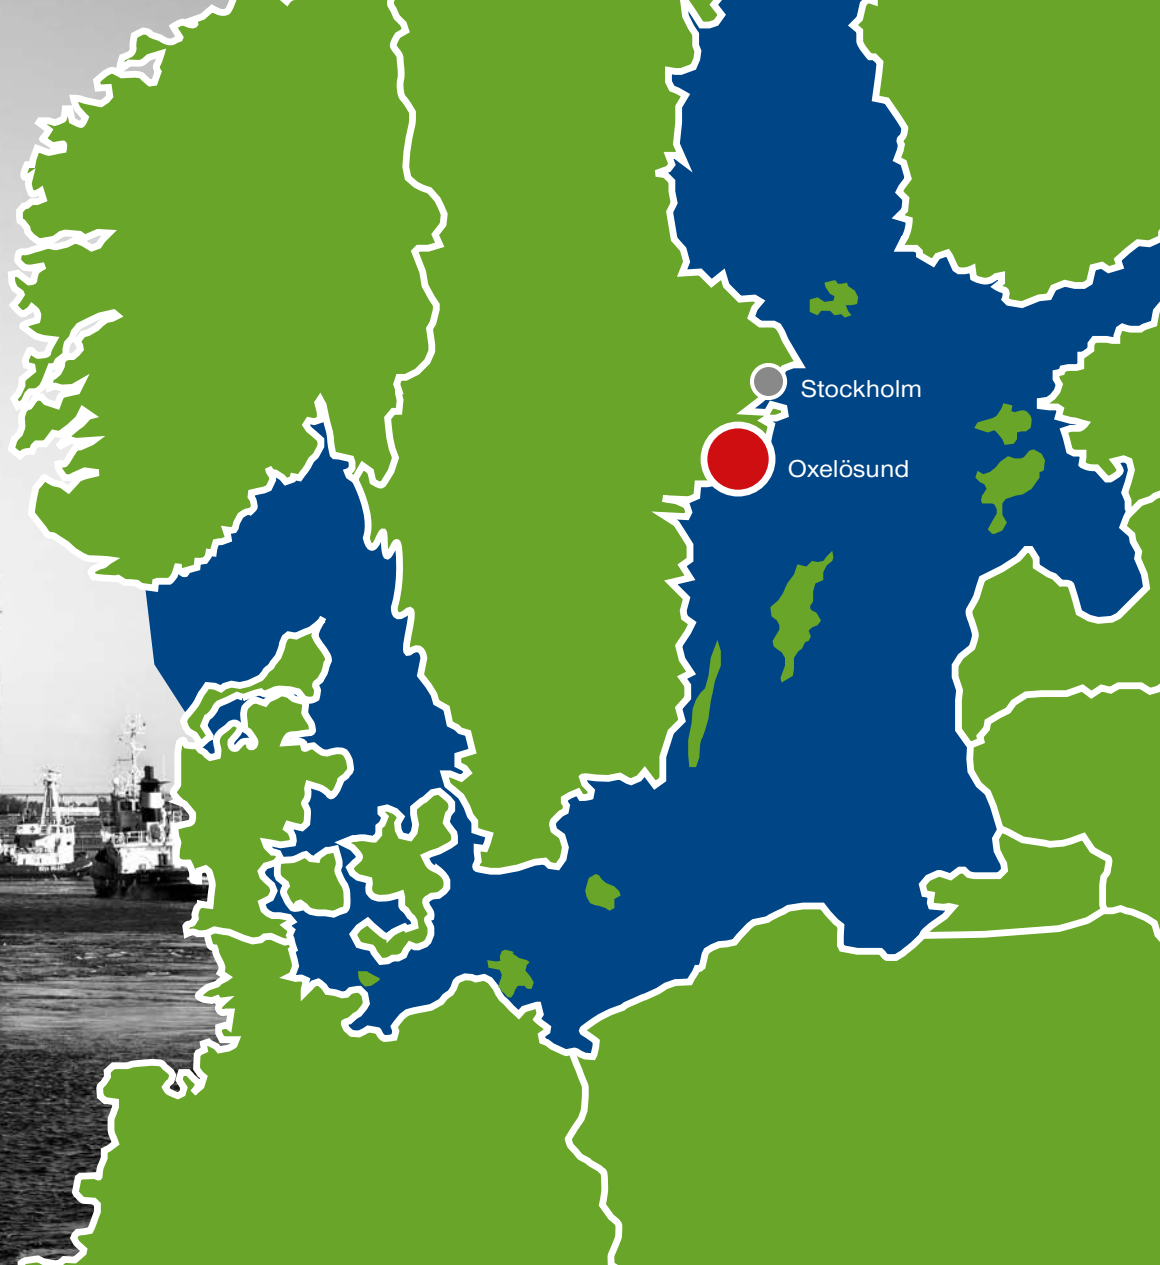

The benefits of our port make it possible for the very largest vessels to call into Oxelösund.

A safe port of call

We have developed safety routines together with the local Director for Maritime Administration and the Maritime Council so we can safely accommodate the very largest ships, currently Capesize vessels (length 244 m, beam 42,5 m) or Panamax.

We ran both full-scale and drawing-board simulation before making our final decisions. We have improved channel marking and will operate a very high-precision GPS system.

We set a high priority on care for the environment and safety.

Our Position

Central port for the Stockholm/Mälardalen area

The port of Oxelösund is situated at the centre of an area of huge economic growth. The Baltic region is expanding. Central Sweden, and especially the Stockholm-Mälardalen region, is expanding. Nearly 3 million people, a third of the Swedish population, live within a 150 km radius.

We are close to the customer. Our proximity to markets in Finland, the Baltic States, Russia, Poland and Germany makes our position even stronger.

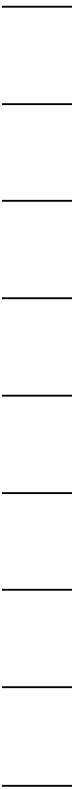

Infrastructure

The port of Oxelösund is connected directly to the motorway system. We have rail links right to the dockside and we are within easy reach of Stockholm-Skavsta airport. Oxelösund is a port of national importance and has been selected by the EU to form part of the Transeuropean Transport Network (TEN-T).

Our geographic position makes us an ideal transport hub – 100 km from Stockholm, 130 km from Västerås and Örebro/Hallsberg, 100 km from Eskilstuna and 100 km from Linköping/Norrköping.

Service 24 hours

Focus: At your service!

As a link providing raw material to a metallurgical plant, there is a requirement for round-the-clock service – all year round. The customer SSAB Swedish Steel are constantly investing and expanding, which guarantees a high level of service long into the future for all our customers.

Teamwork

Planning the best use of resources before the arrival of a vessel is always essential, but whatever the undertaking we have considerable experience. Rest assured the sound professional knowledge of our loyal staff will guarantee an excellent service. Everyone fully understands their “role in the business” and teamwork is at the heart of all we do.

We place the highest importance on caring for your goods and meeting your deadlines.

Logistic Services

Total Transport Solutions

We work constantly to ensure a first-class logistic service for our customers. We look a little deeper to find the best solutions and are interested in areas beyond traditional cargo terminal services.

We provide total transport solutions using an effective network of different transport means for both Swedish and international companies. This involves sea, road and rail transport and the leasing of storage space.

We want to make things easier for you.

● Sophie Alm, Port Operator
Port of Oxelösund.

45 tons

● Lasse Kultala, General Cargo Manager
Port of Oxelösund.

Business Areas

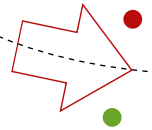

- Dry bulk (coal, coke, mineral ore, grain, scrap metal)
- Coasters (scrap metal, salt, biofuels)
- Liquid bulk (oil, chemicals)
- Steel products (coils, sheet metal, compounds)
- RoRo
- Containers
- Logistic service
- Rental (ground space, offices)

Container Business

Container traffic is the most widely used means of goods transportation in the world, it will continue to grow.

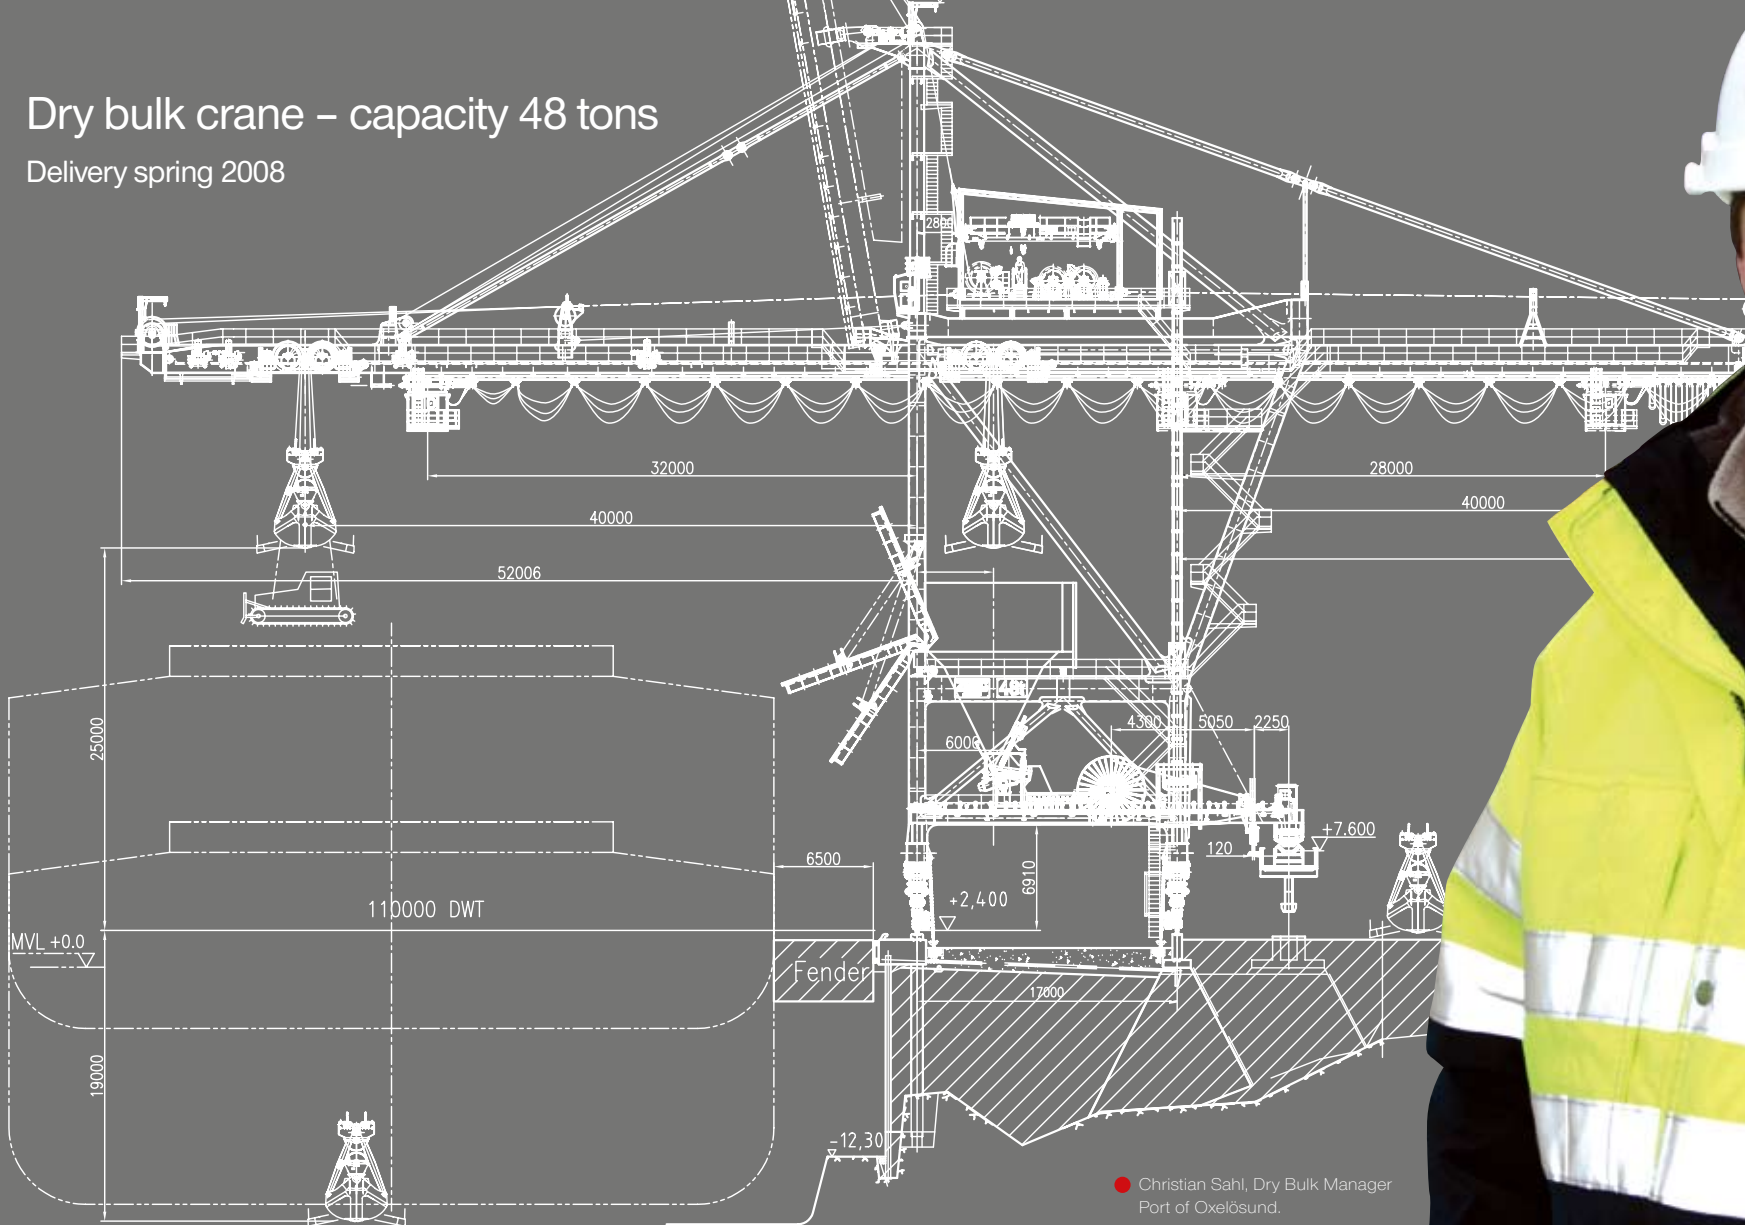

In 2006 we installed a crane with a quayside operating radius of 23,5 m and a 45 ton hook lift/25 ton grab lift capacity. This brought in container traffic from Northern Germany and other countries, which is expected to increase in the future.

Container traffic is managed through a modern, co-ordinated network involving commodity suppliers, shipping companies and forwarding agents based at the port.

Dry bulk crane – capacity 48 tons

Delivery spring 2008

Manpower & Machinery

Human Resources

A port with state-of-the-art machinery, ideal infrastructure, an optimum geographical location and excellent port facilities would be nothing without its people. We therefore work hard to constantly improve the skills and competence of our staff.

We achieve this through training in professional skills and looking closely at our company values: "We care". We are developing further our health and well being. The port of Oxelösund, with a staff of nearly 200, is in good health.

Our people are professionally well qualified and have the customer in focus, always.

Machinery

7 cranes with up to 48 ton capacity

One container crane with 45 ton hook lift/
25 ton grab lift capacity

One bulk goods crane

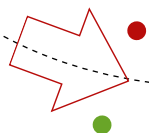

One dry bulk loading crane

2 loading arms for liquid bulk

One Ro-Ro berth

Forklift and container trucks, loaders up
to 42 ton capacity

48 tons

Bulk and Oil Storage

The Port of Oxelösund covers a surface area of 750,000 m² and we have 345,000 m² of storage area. We have an unused area locally of 100,000 m², which with relatively modest investment could be developed to keep pace with a growing business. We own the entire port infrastructure and are also planning in the future to make available an industrial area of between 40,000 and 50,000 m².

Rock Cavern Oil Storage

The Port of Oxelösund owns one of Europe's largest rock cavern storage facilities for fuel oil with a total capacity of 1 million m³. This rock cavern storage is an important hub in the international oil business network.

We have capacity for further expansion.

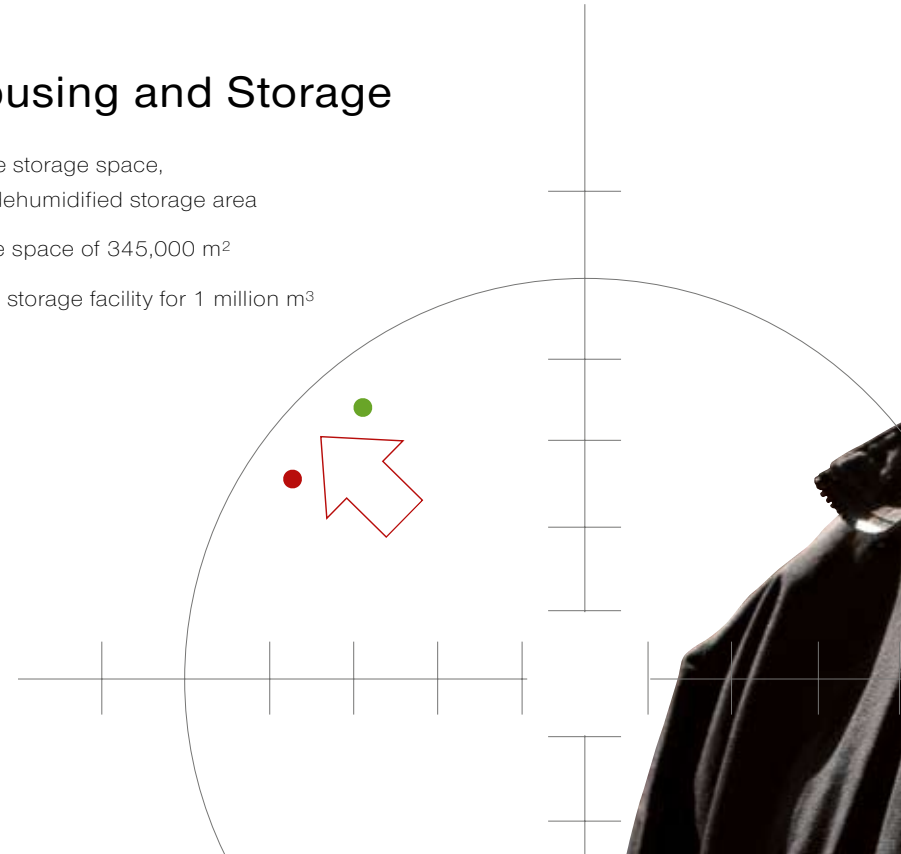

Warehousing and Storage

Extensive inside storage space, including one dehumidified storage area

Outside storage space of 345,000 m²

Rock cavern oil storage facility for 1 million m³

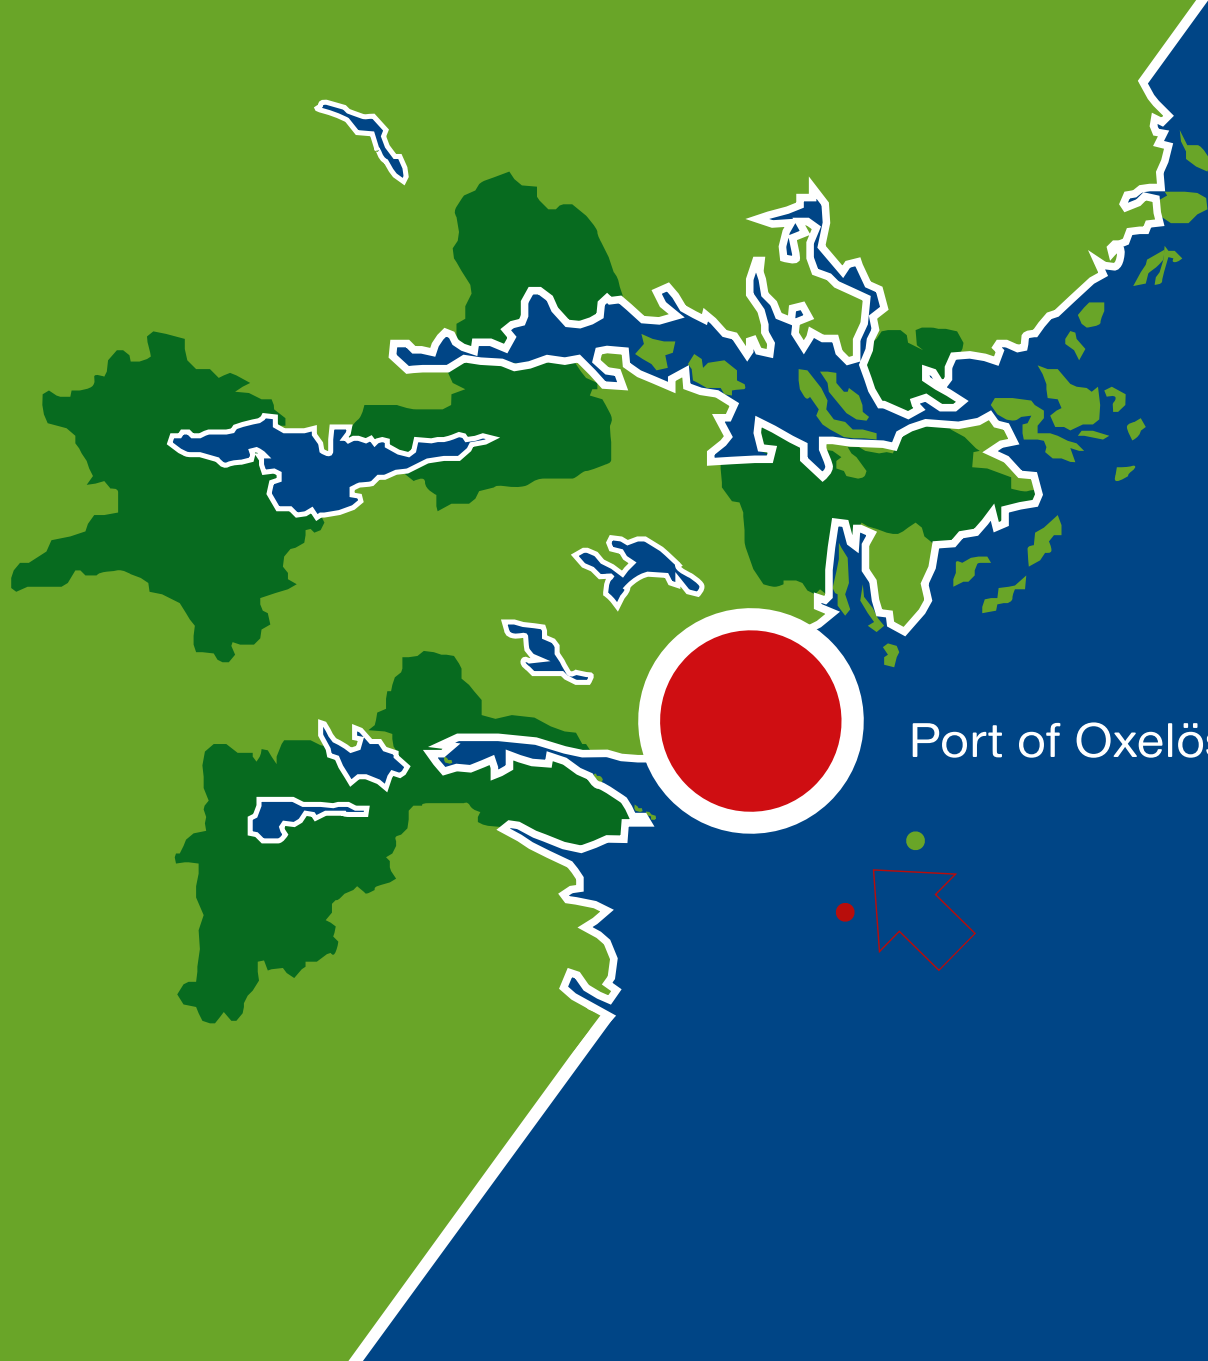

3 storage tanks

● Nils Öberg, Manager Oil & Chemicals
